

TomTom's net-zero emissions reduction targets validated by the Science Based Targets initiative (SBTi)

Amsterdam, Netherlands, 18 December 2025 – TomTom ([TOM2](#)), the specialist in mapping and location technology, today announced that its near-term and long-term science-based greenhouse gas (GHG) emissions reduction targets have been validated by the Science Based Targets initiative (SBTi). This validation confirms that TomTom's decarbonization pathway is aligned with the latest climate science and consistent with achieving net-zero emissions.

SBTi validation marks a significant milestone in TomTom's long-term commitment to environmental stewardship. It reflects the company's broader sustainability strategy and supports the principles outlined in TomTom's [Environmental Policy](#).

As part of its climate strategy, TomTom aims to achieve **net-zero emissions by 2040**, ten years ahead of the Paris Agreement's global 2050 deadline.

TomTom's validated targets

- **By 2030:** 67% reduction in scope 1 and 2 GHG emissions, and 25% reduction in scope 3 emissions
- **By 2040:** 90% reduction across all scopes

These goals are supported by TomTom's **Decarbonization Plan**, which includes actions such as the rationalization of TomTom's office space and increased energy efficiency, electrification of the company's fleet, and the purchase of renewable electricity.

SBTi validation reinforces the company's responsibility to reduce emissions across its entire value chain and its commitment to transparent, science-aligned climate action.

A strategic step in TomTom's sustainability journey

TomTom's approach to climate action is grounded in the belief that long-term value creation must go hand in hand with reducing environmental impact. The company's sustainability strategy aims not only to lower emissions, but also to build a culture of environmental awareness, engaging with stakeholders, and openly reporting progress, challenges, and next steps.

With this validation, TomTom joins a global network of companies whose climate commitments are backed by the SBTi, one of the world's most respected frameworks for corporate decarbonization.

END

About TomTom:

Billions of data points. Millions of sources. Hundreds of communities.

We are the mapmaker bringing it all together to build the world's smartest map. We provide location data and technology to drivers, carmakers, businesses, and developers. Our application-ready maps, routing, real-time traffic, APIs, and SDKs enable the dreamers and doers to shape the future of mobility.

More details about TomTom's climate initiatives can be found in its latest [annual report](#).

About the Science Based Targets initiative (SBTi):

The Science Based Targets initiative (SBTi) is a corporate climate action organization that develops standards, tools and guidance enabling companies and financial institutions to set greenhouse gas (GHG) emissions reduction targets in line with the latest climate science. Established by the Carbon Disclosure Project (CDP), the United Nations Global Compact, the World Resources Institute (WRI), and the World Wide Fund for Nature (WWF), the SBTi aims to accelerate global decarbonization and drive corporate alignment with a 1.5°C pathway.
